

Cybersecurity Certification Scholarship

The Google Cybersecurity Professional certification on Coursera offers a comprehensive understanding of cybersecurity fundamentals. The curriculum covers key topics such as security posture, basics of Security Operations Center (SOC), SQL, Linux, and Python. While not delving deeply into any specific area, the certification serves as a vital primer for gaining insights into various facets of cybersecurity.

The certification curriculum is designed to provide a broad yet essential understanding of cybersecurity. The breadth of topics ensures that participants gain a holistic perspective on cybersecurity, laying the groundwork for further specialization.

Google Developer Student Clubs (GDSC) has successfully facilitated an initiative that empowered over 17 students from Marian to access Google's Cybersecurity Professional certification on Coursera, a program valued at \$300. By making the certification available for free, GDSC has not only expanded educational access but has also empowered students to develop a foundational understanding of cybersecurity.
