

Flutter-Craft Report

GDSC MCE organized Flutter Craft workshop on December 26th and 27th, 2023. The event, conducted virtually on Google Meet, drew a participation of around 35 individuals keen to delve into the intricacies of Flutter, a prominent open-source UI software development toolkit.

Govind SB, the tech lead at GDSC MCE, spearheaded the workshop, sharing valuable insights into Flutter's fundamentals, features, and practical development strategies. The interactive sessions encouraged participants to actively engage in building Flutter projects, fostering a hands-on learning experience.

To support ongoing learning, recorded sessions were made available on the GDSC MCE YouTube channel, allowing participants to revisit the content and solidify their understanding at their convenience.

A noteworthy aspect of the workshop was the invitation for project submissions by January 7th. This initiative not only motivated practical application of knowledge but also provided participants with a platform to showcase their acquired skills.

The workshop garnered positive feedback, with participants expressing enthusiasm and appreciation for Govind SB's expertise. GDSC MCE acknowledges the success of Flutter Craft workshop and eagerly anticipates organizing more engaging events in the future.
